# TABLE OF CONTENTS

Materials Science and Technology (MS&T) 2007: Automotive

## Advanced High-Strength and Other Specialty Sheet Steel Products for the Automotive Industry

### Processing and Properties of TRIP Steels

- Microstructural Evolution During Continuous Galvanizing and Final Mechanical Properties of High Al-Low Si TRIP Steels..........................1  
  *M. Gomez, C. Garcia, A. DeArdo, and D. Haezebrouck*

- Applications of Niobium to Automotive Ultra High-Strength TRIP-Aided Steels with Bainitic Ferrite and/or Martensite Matrix...............................15  
  *K.-I. Sugimoto, and M. Murata*

- Dynamic Behavior of TRIP and DP Steels in Tension at Different Temperatures ........................................27  
  *S. Curtze, M. Hokka, V.-T. Kuokkala, and P. Peura*

### Processing and Properties of Advanced High Strength Specialty Steels I

- Functional Improvement of Automotive High Strength Steel Grades by Niobium Microalloying.................................................................37  
  *H. Mohrbacher*

- Effect of Overaging on the Properties of Dual Phase Steel during Continuous Annealing ..................49  
  *X. Tao, S. Birosca, H.S. Kim, and B.C. De Cooman*

- Microstructural Evolution in a Complex-Phase Steel..................................................................................61  
  *S. Sarkar, M. Militzer, W.J. Poole, and F. Fazeli*

- Dilatometric Study of the Quench and Partitioning (Q&P) Process..........................................................73  
  *S.J. Kim, Han S. Kim, and B.C. De Cooman*

- Effect of Aluminum Content on the Mechanical Properties of Dual Stabilized Ti-Nb Interstitial Free High Strength Steel (IF-HSS).......................85  
  *H. Kang, C.I. Garcia, K. Chin, and A.J DeArdo*
Processing and Properties of Other Advanced High Strength and Specialty Steels II

Critical Review of Hot Stamping Technology for Automotive Steels ..................................................99
   D.W. Fan, H.S. Kim, S. Birosca, and B.C. De Cooman

High Strength Air-Hardening Steels for Automotive Applications .........................................................111
   U. Diekmann, C.-M. Rogall, T. Saeuberlich, and A. Frehn

Characterization of Nano-Sized Precipitates in Microalloyed Steels ......................................................123
   J. Lu, H. Henein, and D.G. Ivey

Manufacturing with Advanced High Strength Steels I: Fracture in Bending and Edge-Stretching

Metallurgical Aspects Regarding the Stretching Edge of Advance High Strength Steel .........................135
   C. Chiriac

The Susceptibility to Shear Fracture in Bending of Advanced High Strength Sheet Steels ......................145

Influence of the Edge Conditions on the Hole Expansion Property of Dual-Phase and Complex-Phase Steels ..........................................................................................................................159
   A. Karelova, C. Krempaszky, E. Werner, T. Hebesberger, and A. Pichler

Influence of the Shear Cutting Process on Damage in Laboratory Dual Phase Steels Developed for automotive Application ....................................................................................................................171

Some Aspects of Thermo-Mechanical Properties of High Mn TWIP Steels Investigated by In-Situ Infrared Thermography ............................................................................................................183
   L. Chen, S. Birosca, Han S. Kim, S.K. Kim, and B.C. De Cooman

Manufacturing with Advanced High Strength Steels II: Simulation, Springback, Joining, Tool Materials

Modeling and Characterization of High Frequency Induction Welds in Advanced High Strength Steels ..........................................................................................................................195
   Y. Adonyi, V. Jurko, and A. Lesko

Sources of Variability in the Fatigue Strength of Spot Welded Specimens ..............................................207
   H. Kang, J.J.F. Bonnen, and R.M. Iyengar

Multibody Joining: A New Method for Spot Joining of Sheet Materials ..................................................227
   M.P. Miles, K. Kohkonen, B. Siemssen, R. Steel, S. Packer, and Y.S. Sato

Tool Steel Selection for Cold Forming of High Strength Steels Based on the Stress Distribution in Tools ..........................................................................................................................235
   R. Hernandez, M.D. Riera, D. Casellas, I. Valls, B. Casas, and J.M. Prado
Auto/Steel Partnership 20th Anniversary Symposium

Formation of Ceramic Layer on Steel Strips by Combined Method of Cladding and PEO
H.S. Dehghanian, M.H. Shariat, A. Deghan, and H. Daneshmanesh

Automotive and Ground Vehicles: Applications of Materials to Vehicle Designs

Advanced Materials and Processes

Development and Use of Polyamide 6 for Automotive Safety Restraint System Components
M. Huisman, and N. Bokhari

Optimization of Energy Saving Materials and Compressed Insulating Layers in the Automotive Chemical Converters
E. Litovsky, V. Issoupov, J. Kleiman, R. Latham, F. Lacin, A. Kotrba, and K. Olivier

Study of Intrusion Bending for Steel Tubes with Thin Wall Thickness
H. Naoi, N. Kitakami, M. Mizumura, and Y. Kuriyama

Armor/Armored Vehicles

Function-Oriented Design of Inovative Composite Materials for High Speed Impact
H. Wang, Y. Cui, Z.-D. Ma, and D. Rose

Automotive and Ground Vehicles: Materials and Processes for Vehicles

Aluminum: Alloy Development and Microstructure

Texture Variation in a Heat Treated Heavily Deformed Aluminum Alloy 6061
S. Adedokun, J. Schwartz, and H. Garmestani

Tribology, Surfaces, Lubricants and Coatings I

Review of Motor Vehicle Applications for Functional Thermal Spray Coatings
R. Betts

Development of Thin Film Coatings for Dies Used in Aluminum Pressure Die-Casting of Automotive Components
J. Lin, B. Mishra, S. Myers, S. Bhattacharyya, J.J. Moore, and P. Ried
Cast Iron

Effects of Refractory Coatings on the Performance of a Chemically Bonded Sand System at Elevated Temperatures .......................................................... 325
S. Ramrattan, and A. Abdelwahab

Automotive Light Metal Castings: Technology and Applications

Melt Treatment, Control and Casting Process Development

Effect of Applied Isostatic Pressure during Solidification on Static Mechanical Properties of Lost Foam Aluminum Castings ........................................ 333
P. Chitalapati, J. Griffin, R. Griffin, and H. Littleton

Studies on the Surface Oxidation of Molten Aluminium – Silicon Alloys Using Laser as a Probe .......................................................... 345
K. R. Udupa, and S. Chatterjee

Visualization of the Muliphas Flow in the Lost Foam Casting Process by Neutron Radiography and Image Processing ........................................ 359
X. Luo, and D. Penumadu

Integrated Computational Materials Engineering, Computational Materials Design and Applications

Establishment of Nucleation Model and Microstructure Simulation of Al-Si Alloy for Low Pressure Die Casting .................................................. 367
B. Li, Q.Y. Zu, and B.C. Liu

Casting Process Development, Simulation and Modeling

Simulation of Microporosity in Aluminum Castings by Coupling Hydrogen Diffusion with Interdendritic Feeding ........................................ 377
G.P. Backer, and Q. Wang

Mold Filling Simulations for the Semi Solid Metal Manufacturing Process ......................... 389
G.P. Backer

Casting Process Development, Simulation, Modeling and Optimization

Study of Microstructure and Mechanical Properties of Continuously Cast AA6111 Strips Following Horizontal Single Belt Casting (HSBC), Rolling and Heat Treatment ........................................ 399
D. Li, M. Isac, and R.I.L. Guthrie
The Role of High Pressure Die Casting in the Expanded Use of Aluminum and Magnesium for Automotive Applications .................................................................409

J. Yurko

Alloy Development, Microstructure Evolution and Phase Transformation

Microstructural Examination of Directionally Solidified Mg Alloys Confirming Mg-Rich Phase Equilibria of Mg-Al-Ca .........................................................................................................................423

H. Cao, C. Zhang, J. Zhu, G. Cao, S. Kou, and Y.A. Chang

Characterization of Combinatorially Prepared Mixed-Phase Magnesium-Aluminum Thin Film Alloys ..........................................................................................................................435

C.H. Olk, and D.B. Haddad

Casting Process Development, Material Properties and Performance

The Effect of Hydrogen Level, Sr Additions, and Grain Refinement on the Spatial Distribution of Porosity in 319-Type Alloy Castings ..........................................................................................................................445

J. Zindel, and L. Godlewski

Regarding Influences of Production Processes on Material Parameters in Fatigue Life Prediction (Dendrite Arm Spacing, Boundary Layer Model) .........................................................................................................................457

M. Meise, W. Aichberger, H. Riener, and H. Dannbauer

Microstructure Evolution, Phase Transformation and Light Metal Composites

Refinement of Eutectic Grains/Cells in Near-Eutectic Al-Si Alloys ........................................................................................................................................469

H. Liao, M. Zhang, H. Wang, G. Dong, and G. Sun

Influence of In Situ TIB2 Particles on the Microstructural, Mechanical, and Abrasive Wear Behavior of A356 Alloy ..................................................................................................................................................483

S. Kumar, V.S. Sarma, and B.S. Murty

Development and Testing of Chilled Aluminum Alloy-Corundum Particulate Composite for Automotive Applications ........................................................................................................................................491

K.S. Shekar, and J. Hemanth

High-Density Hydrogen Storage for Automotive Applications: Materials and Methods

Tanks, Analysis, & Systems Engineering

Effects of Metal Hydride Properties on the Performance of Hydrogen Storage Systems ..........................................................................................................................503

T. Johnson, D. Dedrick, and S. Jorgensen
Zinc Coated Steel Sheets

Zinc Coated Sheet Steels Session 1

Changes in the Mechanical Properties of Galvanized TRIP Steels ..........................................................525
  E.J. Petit, B. Bolle, M. Gilles, I. Sr.iti, J. Gilgert, and Z. Azari

Processing of TRIP Steels in Continuous Galvanizing Lines: Surface and Subsurface oxidation Study .................................................................535
  Y.F. Gong, S. Birosca, H.S. Kim, and B.C. De Cooman

Effect of Continuous Galvanizing Heat Treatments on the Microstructure and Mechanical Properties of Al-Si TRIP Steels ............................................................................................................547
  E.M. Bellhouse, and J.R. McDermid

Properties of Galvanized and Galvannealed High Strength Hot Rolled Steel ..........................................................557
  R. Fourmentin, J.R. McDermid, V. Gertsman, S. Dionne, and F. Goodwin

Characterizing Reactive Wetting Kinetics of High-Mn Dual-Phase Steels in Hot-Dip Galvanizing Baths ..........................................................569
  R.J. Meguerian, and J.R. McDermid

Zinc Coated Sheet Steels 2

ALEUTEC, a New Zinc Coating for Steel ................................................................................................579
  W. van Ooij, J. Zervoudis, and G. Poag

Mechanism and Growth of Dross on the Submerged Pot Hardware in Galvalume (GL) Bath ..........................................................591
  A. Varadarajan, and B.S.-J. Kang

XRF as a Method for Measuring Coat Weight Thickness of Various Conversion Coatings on Steel or Aluminum ..........................................................599
  S. Fess

Author Index ..........................................................................................................................613

Subject Index ..........................................................................................................................617
# TABLE OF CONTENTS

**Materials Science and Technology (MS&T) 2007: Electronic and Magnetic Properties**

## Ferroelectrics and Multiferroics

### Magnetoelectric Composites

- Fabrication of Thick Hard Magnetic Coatings by thermal Spray Technologies ................................. 1  
  *B. Džur, C. Zimmer, and G. Thomas*

### Multiferroics, Nanoscale Structures and Properties

- Dielectric Studies on Ferroelectromagnetic SrBi$_{5-x}$La$_x$FeTi$_4$O$_{18}$ ........................................................ 7  
  *S.V. Suryanarayana, E. Venkata ramana, and T.B. Sankaram*

### Domain Switching, Phase Transition, and Thin Film Phenomenon

- Integrated Technology of Decoupling BST Thin Film Capacitors ....................................................... 17  
  *N. Kamehara, and K. Kurihara*

## Ferroelectric Materials, Characterization, and Properties

- Structural and Electrical Properties of 0.38Bi(GaxSc1–x)O3 - 0.62PBTiO3 Piezoelectric Ceramics ................................................................ .................................................................................... 25  
  *Y. Jiang, C. Du, B. Qin, Y. Chen, X. Yue, D. Xiao, and J. Zhu*

- Lead-Free Sodium Potassium Niobate Piezoelectric Ceramics and Middle Frequency Resonator ................................................................ .................................................................................... 35  
  *Q. Chen, L. Chen, Q. Li, D. Xiao, and J. Zhu*

## Poster

- Dielectric Properties of Sr2+ and Sn4+ Co-substituted BaTiO3-Based Solid Solution Ceramics ................................................................ .................................................................................... 43  
  *S.N Yun, X.L. Wang, D.L.Xu, and H. Li*

- Pb(Zr0.52Ti0.48)O3 Films Grown on Nickel Substrate by Pulsed Laser Deposition ......................................... 53  
  *Y.H. Yu, M.O. Lai, and L. Lu*
General Topics in Electroceramics

Electroceramic Materials Processing and Characterization

Non-Lead Based Ceramic Film Processing by Laser Transfer for Improved Integration and System-in-Package ..........................................................................................................................63

T. Chakraborty, R.E. Miles, and S.J. Milne

Effect of Ca Substitution on the Microwave Properties and Lattice Vibration of Ba(Mg1/3Ta2/3)O3 Ceramics .............................................................................................................................................73

T. Shimada

Sensor Materials and Performance

Metal-Oxide Nanoparticle Gas Sensor Arrays ..........................................................................................85

E. Beach, M. Andio, P.A. Morris, and S. Stewart

Sosman Symposium - Electroceramics II

Characterization of CeO2/Al2O3 Nano Composites for SOFC Applications ..................................................97

R. Chockalingam, H. Giesche, and V.R.W. Amarakoon

International Symposium on Dielectric Materials: Design, Preparation and Applications

Composition Processing, Micro-/Nanostructure, and Property Relationships

Controlled Designing of Fine Particles at Molecular and Nano Levels .........................................................109

D. Uskokovic

Ferroelectric Relaxors, Single Crystals, and Novel Compositions

Novel Class of Capacitor Materials .............................................................................................................121

G.D. Singh

Growth, Characterization and Transport Properties of Pb0.5Zn0.5S Mixed Crystals .................................127

B. Rajam, E. Nagabushan, M. Nanabhushanam, and K. Yadaiah

Mechanism, Modeling and Designing Issues for Piezoelectric Materials

Effect of Acceptor (Mg) Concentration on the Electrical Resistance at Room and High (200°C) Temperatures of Acceptor (Mg)-Doped BaTiO3 Ceramics .........................................................143

Temperature- and Stress-Dependent Scaling of Ferroelectric Hysteresis in Soft and Hard PZT Bulk Ceramics..................................................................................................................................155
R. Yimnirun, S. Wongsaenmai, R. Wongmaneerung, M. Unruan, N. Wongdamnern, A. Ngamjarurojana, Y. Laosiritaworn, and S. Ananta

Interfacial Polarization in Liquid Phase Sintered Ceramic/Glass Composites.............................................167
E.P. Gorzkowski, M.-J. Pan, B.A. Bender, and C.C.M. Wu

**Ferroic Materials Synthesis and Properties: A Joint Session with Electronics Division's General Session**

Optimization of Dry Powder Deposition Parameters for the Production of Dielectric and Magneto-Dielectric Composites .................................................................175
S. Nergiz, and G. Kizilta

Dielectric Characterization of M and W-Type Barium Hexaferrite Prepared by Multiple Sintering Techniques .................................................................189
P. Shepherd, I. Harrison, and K.K. Mallick

Fabrication of Photonic Assemblies for High-Gain Antennas .................................................................201
G. Mumcu, S. Yarga, K. Sertel, and J.L. Volakis

Thermoelectric Power, Dielectric and Magnetic Properties of Sr-La M-Type Hexagonal Ferrites .................................................................209

**Synthesis and Properties of Thin Films, Thick Films, Laminated, and Multilayer Materials and Devices**

BaTiO3 Thin Films on Metallic Substrates: Fabrication, Microstructure and Property.................................223
J.C. Jiang, Z. Yuan, J. Lie, J. Weaver, C.L. Chen, B. Lin, V. Giurgiutiu, R.Y. Guo, and A. Bhalla

**Dielectric and Piezoelectric Materials and Composites: Applications and Processing**

Microstructure and Dielectric Properties of Barium Strontium Titanate Derived by Sol-Gel.................................................................233
H. Manuspiya, G. Panomsuwan, H. Ishida, and A. Bhalla

**Poster**

A Two-Stage Solid-State Reaction to Lead Nickel Niobate Powders .................................................................249
O. Khamman, R. Yimnirun, and S. Ananta

Synthesis and Characterization of Magneto-Dielectric Composites for Radio Frequency Applications.................................................................261
S. Farhat, M. Hawley, L. Kempel, and S. Balasubramaniam
Effect of Nb-Doping on Electrical Properties of Pb(Zr0.52Ti0.48)O3 Ceramics .........................................269  
*P. Ketsuwan, Y. Laosiritaworn, S. Ananta, R. Yimnirun, and D.P. Cann*

**Perovskite Material Engineering**

**Nano-scale Engineering B: Thin Films and Dielectric Response**

A-Site Substitution Controlled Dielectric Dispersion in Lead Free Sodium Bismuth Titanate .................................................................279  
*S.V. Suryanarayana, M. Raghavender, G. Prasad, and T. Bhimasankaram*

**Spintronic Materials and Devices**

**Spintronic Materials II**

Room Temperature Ferromagnetic Dilute Magnetic Semiconductor Zn-0.95Co0.05O .........................295  
*Q. Liu, C.L. Gan, and G.C. Han*

**Structure-Property Relationships of Multifunctional Oxide Thin Films and Interfaces**

**Characterization and Application of Metal-oxides**

Interface Engineering in the High-K Dielectrics Gate Stacks .................................................................305  
*S.J. Wang*

**Oxide Film Synthesis and Integration**

Strain-Enhanced Dielectric and Ferroelectric Properties of  
Pb(Zr0.8Ti0.2)O3/Pb(Zr0.2Ti0.8)O3 Multilayer Thin Films Without Buffer Layers .............................315  
*H. Liu, X. Gong, J. Liang, X. Li, D. Ziao, J. Zhu, and Z. Pu*

**Poster**

Porous Titania Films Prepared in Aqueous Solution ..................................................................................325  
*Y. Masuda, T. Kimura, X. Hu, X. Meng, K. Kato, and T. Ohji*

Magnetic Energy Distribution in Polycrystalline Sputtered CoCr Magnetic Thin Films .........................335  
*J. F. Al-Sharab, J.E. Wittig, G. Bertero, T. Yamashita, J. Bentley, and N. Evans*

Author Index ...........................................................................................................................................343  
Subject Index ........................................................................................................................................345
# TABLE OF CONTENTS

**Materials Science and Technology (MS&T) 2007: Energy**

## Degradation of Materials for Application in Nuclear Power and Waste Management Systems

## Degradation of Materials for Application in Nuclear Waste Management Systems I

- Repassivation of Alloy 22 Crevice Corrosion at 90°C .......................... 1
  - A.K. Mishra, and G.S. Frankel

## Degradation of Materials for Application in Nuclear Waste Management Systems II

- A Study of Corrosion and Stress Corrosion Cracking of Carbon Steel Nuclear Waste Storage Tanks .................................................... 13

- Electrochemical Formation of Passive Film on Carbon Steel and Its Interaction with Hydrogen Peroxide ........................................ 25
  - W. Xu, X. Zhang, and J.C. Wren

## Degradation of Materials for Application in Nuclear Power Systems

- Modelling of the Oxide Film Growth and Layer Restructuring on Stainless Steels in LWRs ................................................................. 39
  - I. Betova, M. Bojinov, P. Kinnunen, T. Saario, and K. Lundgren

- Behaviour of NiCr Coatings under Different Environments ......................... 53
  - N. Bala, H. Singh, and S. Prakash

## Poster

- A Passive Film Formed on Alloy 600 as a Steam Generator Tubing Material .............. 67
  - D.-J. Kim, H.C. Kwon, S.S. Hwang, and H.P. Kim
Encapsulation and Immobilization of Hazardous and Nuclear Wastes Using Ceramics, Glass and Other Materials

Use of Analytical Techniques in Nuclear Waste Disposal I

Key Elements of Characterizing Savannah River Site (SRS) High Level Waste (HLW) Sludge Insolubles through Sampling and Analysis .................................................................79
   S. Reboul, B. Hamm, P. Hill, D. DiPrete, N. Bibler, and W. Wilmarth

Physical and Chemical Measurements Needed to Support Disposition of Savannah River Site Radioactive High Level Waste Sludge .................................................................91
   B. Hamm, S. Reboul, P. Hill, and N. Bibler

Use of Analytical Techniques in Nuclear Waste Disposal 2

Development of a New Zirconolite-Base Glass-Ceramic for Immobilization of Radioactive Wastes ...................................................................................................................99
   M. Mahmoudysepehr, V. Marghussian, J. Javadpour, and H. Kazemian

Accelerated Weathering of Fluidized Bed Steam Reformation Material Under Hydraulically Unsaturated Conditions .................................................................107
   E.M. Pierce

Energy: Encapsulation and Immobilization of Hazardous and Nuclear Wastes Using Ceramics, Glass and Other Materials

Process Changes to DWPF to Increase Throughput and Incorporate Salt Streams ..................................119
   C. Herman, D. Peeler, T. Edwards, M. Stone, and M. Smith

Poster

Investigation of LTC SS 316 as Bipolar Plate material for PEMFC Application ................................131
   V. Nikam, and T. Johns

Energy Materials

Characterization Methods

A Micro-Indentation Method for Assessment of TBC Bond Coat Systems ........................................141
   C. Feng, M. Alvin, and B.S.-J. Kang
Solar Energy Materials II

Evaluation of Ionic Liquids as Heat Transfer Materials in Thermal Storage systems .............................................................151

M. Zhang, and R.G. Reddy

Energy Materials and Technologies I

A Study on the Synthesis of LiFePO4: A Potential Cathode Material for Lithium Ion Batteries ...................................................................................................................................................161

K.E. Howard, and E.J. Swedberg

Growth of Hydrous Manganese Oxides Nanowall Arrays and Their Li-Ion Intercalation Property....................................................................................................................................................173

New Processes and Characterization of LiCoO2 Chemistries for Li-Ion Batteries.................................................................181

J.F. Al-Sharab, F. Cosandey, B. Yakshinskiy, N. Pereira, F. Badway, and G.G. Amatucci

Laser Doping Fabrication of Energy Conversion Devices .............................................................................................................191

N.R. Quick, S. Bet, and A. Kar

Effects of Thermal History on the Dielectric Properties of Nanostructured Titania .................................................................203

S. Chao, V. Petrovsky, and F. Dogan

Energy Materials and Technologies II

Kinetics of Supercritical Water Reformation of Ethanol to Hydrogen..........................................................................................213

J. Wenzel, J. Picou, M. Factor, and S. Lee

Mineralogical Sequestration of Carbon Dioxide through Aqueous Processing of Steelmaking Slag ........................................................................................................................................225

C.H. Rawlins, S.N. Lekakh, V.L. Richards, and K.D. Peaslee

Poster

Processing, Characterization and Dielectric Properties of Hydrothermal BaTiO3 Films on Stainless Steel ................................................................................................................................................239

S. Chao, V. Petrovsky, and F. Dogan

Fabrication of NbC, ZrC and UC-Based Silicon Carbide Matrix Composites for Nuclear Applications Using Polymer Infiltration and Pyrolysis ........................................................................................................253

A.K. Singh, and R.P. Singh
Fuel Cells: Materials, Processing, Manufacturing and Power Management Technologies

Cell Materials, Performance, Degradation, Manufacturing of High Temperature FCs I

Thermodynamic Modeling and Testing of the H2/O2/Ni/NiO System .......................................................... 263
I.D. Kellogg, U.O. Koylu, V. Petrovsky, and F. Dogan

Cell Materials, Performance, Degradation, Manufacturing of High Temperature FCs II

The Properties and Performance of Micro-Tubular (Less than 1mm OD) Anode Supported Solid Oxide Fuel Cells ................................................................. 271

PEM Fuel Cells, Fuel Processing, and Catalysts

Effect of Fuel Conditions on Performance of Novel PEMFC Flow Field Design ..................................... 285
V.V. Nikam, and R.G. Reddy

Sealing, Contact, Stack Manufacturing, and Balance of Plants of SOFC

Candidate Alloys for Cost-Effective, High-Efficiency, High-Temperature Compact/Foul Heat-Exchangers .............................................................................................................................. 295
N. Evans, P. Maziasz, J. Shingledecker, B. Pint, and Y. Yamamoto

Development of Candidate Silver Cermet Contact Materials for Cathode Side in Solid Oxide Fuel Cell ......................................................................................................................... 307
T.-B. Sheppard, and B.S.-J. Kang

Interconnects of High Temperature Fuel Cells I

Corrosion of Metallic SOFC Interconnects in Coal Syngas ........................................................................ 317
R.R. Dastane, X. Liu, C. Johnson, and S. Mao

The Application of Protective Coatings on Crofer 22 APU ........................................................................ 331
M.R. Bateni, P. Wei, and A. Petric

Electrodeposition of Mn-Co Alloys on Stainless Steels for SOFC Interconnect Application ................................................................................................................................. 341
J. Wu, Y. Jiang, C. Johnson, M. Gong, and X. Liu
Interconnects of High Temperature Fuel Cells II

The Formation of Alumina Coating on Ferritic Steels .................................................................353
  M. R. Bateni, L. Quintero, and A. Petric

Poster

La0.67Sr 0.33MnO3 Coating on SOFC Interconnect by Plasma-Sputtering ..............................363
  C.-L. Chu, Y.-N. Cheng, and S. Lee

Glass-Ceramic Seal Stability Study for Solid Oxide Electrolyzer/Fuel Cells .........................371

The Application of a Novel Ni-Cr-Si Coating on Fe-9Cr Steel for SOFC Interconnects ..........381
  L.S. Quintero, D. Laverde, M.R. Bateni, and A. Petric

Characterization of Advanced Alloys-I

Tensile Response of Titanium at Reasonable High Strain Rates and Temperatures.................................99
M.F. Quinlan, and P. Phelan

A Simple Indentation Measurement Technique for Surface Mechanical Property Evaluation ..........................................................111
C. Feng, and B.S.-J. Kang

A Study of Aging Effects on Hardness and Tensile Properties of 2219 Aluminum Alloy .................119
I. Jabeen, and R. Ahmad

Poster

The Minimum Coefficient of Friction Obtained by MATROLL Software and the Effect of Improper Friction during the Cold Rolling of Steel ..........................................................129
H. Abdollahi, and K. Dehghani

Discovery and Optimization of Materials through Computational Design

Application of Atomistic Modeling for the Design of Materials I

Dislocation Absorption in an Asymmetric Tilt Boundary..........................................................139
J. Askin, P. Anderson, and R. Hoagland

Continuum Theoretical and Numerical Analyses to Describe the Properties, Equilibrium, and Kinetics of Materials I

A New Method for Simulating Strongly Anisotropic Cahn-Hilliard Equations.................................149
S. Torabi, S. Wise, J. Lowengrub, A. Rätz, and A. Voigt

Poster

Wavelet-Based Local Region-of-Interest Reconstruction for Synchrotron Radiation X-ray Microtomography ..........................................................163
L. Li, H. Toda, T. Ohgaki, M. Kobayashi, K. Uesugi, and Y. Suzuki

Frontiers in Materials Science: Materials for Sports and Medicine

Implant Performance

Finite Element Analysis of PMJMA Reinforced Osteoporotic Femurs .............................................175
M.N. Shaw, M.E. Bolander, K.E. Bennet, S. McEligot, M.J. Burke, J.T. Bronk, and D.M. Dragomir-Daescu
Sports, Prosthetics and Biocompatibility

Formation of Biomimetic Porous Calcium Phosphate Coatings on Surfaces of Polyethylene/Zinc Stearate Blends ..............................................................187
J. Drelich, and K.G. Field

Tensile Deformation Behavior of Epoxy Composites Reinforced With Three Different Woven Fabrics ........................................................................199
A.A. Mazen, M.A. Metwali, and N.A. El-Mahallawy

# TABLE OF CONTENTS

## Materials Science and Technology (MS&T) 2007:
### Materials and Systems

### Coatings as an Enabler of System Performance

#### Environmental Barrier Coatings/Erosion II

- Corrosion/Erosion Resistance of Ceramic Oxide Coatings Against CF4 + O2 Plasma ......................... 1
  - *K.H. Baik, Y.R. Lee, and H.K. Seok*

- Revolutionary UV-Cured Nanotechnology Thin Film Coatings with Superior Barrier Properties ........................................................................................................ 9
  - *T. Krotine, and S. Ramsey*

- Oil-Production Equipment Component Hardening with the Help of the Thermochemical Treatment ................................................................................................. 17
  - *V.P. Artemyev, A.G. Sokolov, E.G. Sokolov, and A.A. Chalov*

#### Coatings Via Spray Processes II

- Consolidation of Composite Materials by Kinetic Spray Process ....................................................... 29
  - *S.B. Zhao, B.a. Gillispie, T.Y. Han, N. Patel, and S. Khalid*

- Structure-Property Relationship in Particle Reinforced metal-Matrix composites Made by Low Pressure Gas Dynamic Spray ........................................................................ 45
  - *R.Gr. Maev, V. Leshchynsky, and K.Y. Sastry*

### Coatings for Fatigue and Wear Applications

- Thick Nano-Structured CVD Coating HARDIDE as Enabler for Engineering Systems in Extreme Wear and Erosion conditions ......................................................... 55
  - *Y.N. Zhuk*

### Poster

- Synthesis and Characterization of Atmospheric Pressure Chemically Vapor Deposited Aluminum ........................................................................................................ 67
  - *S. Maeng, S. Gu, R. Levy, F. Gomez, S. Newberg, D. Deavenport, E. Brooman, E. Berman, and J. Beatty*
# Commonality of Phenomena in Composite Materials

## Particle Reinforced Composites

Review of the Mechanical Behavior of Micrometric & Nanometric Particulate Reinforced Metal Matrix Composites .................................................................79  
* A. Ahmed, A.J. Neely, and K.K. Shankar

Mechanically Millied Al Base MMC Reinforced with Ti3Al Intermetallics .........................................................91  
* M. Adamiak

## Fiber Reinforced Composites II

A Study of the Deformability of Layered Solids under Plane Strain Condition .................................................103  
* M.H. Serror, J. Inoue, T. Koseki, and Y. Fujino

## Coating Characterization

The Development of Photo-Stimulated Luminescence Spectroscopy for 3D Stress Measurements in the Thermally Grown Oxide Layer of Thermal Barrier Coatings ..............................................................115  
* S. Raghavan, and P.K. Imbrie

Indenter Shape Effects on Interface Adhesion Measurement in Thermal Barrier Coating Systems .................................................................127  
* Q. Ma, J.L. Beuth, G.H. Meier, and F.S. Pettit

Influence of a Viscoelastic Surface Infiltrate on the Damping Properties of Plasma Sprayed Alumina Coatings Part I: Room Temperature .................................................................139  
* P. Torvik, R. Willson, and J. Hansel

Influence of a Viscoelastic Surface Infiltrate on the Damping Properties of Plasma Sprayed Alumina Coatings Part II: Effects of Elevated Temperatures and Static Strain ...........................................151  
* P. Torvik, R. Willson, J. Hansel, and J. Henderson

## Poster

Microstructure and Mechanical Properties of In-Situ TiC Dispersed Steel Matrix Composite .................................................................163  
* K.I. Parashivamurthy, P. Sampathkumaran, S. Seetharamu, and M.N. Chandrasekharaiyah

Kinetics of Radiation Alterations in Polymer Materials Irradiated by High-Energy Electrons .................................................................179  
* G.A. Ismailova

Production and Mechanical Properties of an Epoxy Resin/Aluminum Composite .........................................................183  
* R. Gonzalez-Aguirre, A. Altamirano-Torres, E. Rocha-Rangel, and A.B. Soto-Guzman
Copper and Copper Alloys for Emerging Technologies

Copper Alloy Technology I

Bend Formability – Characterization and Performance

L. Wojnicz, J. Stainbrook, P. Robinson, K. Funke, and S. Theobald

Fundamental and Applied Aspects of Newly Developed Cu-Al-Mn-Based Shape Memory Alloys

T. Omori, Y. Sutou, R. Kainuma, and K. Ishida

Copper Alloy Technology II

Advances in Coppery Alloy Mold Materials for Plastic Injection and Blow Molding

J. Kuli, and R. Kusner

Poster

Surface Characteristics of Silver Coated Copper Composite Powder by Activation-Electroless Plating Method

J.G. Ahn, H.T. Hail, D.J. Kim, J.S. Sohn, and H.S. Chung

Glass and Optical Materials

Metallic Glasses

Bulk Metallic Glass Formation in Ni-Rich Ternary Ni-Nb-Zr Alloy System

Z.W. Zhu, H.F. Zhang, B.Z. Ding, and Z.Q. Hu

Bulk Metallic Glasses and Synthesis by Chill Block Casting

N. Patki, S. Pawak, P. Kulkarni

Quasi-Static and High Strain-Rate Compression Behavior of an Fe-Based Bulk Metallic Glass

G. Sunny, V. Prakash, A.S. Nouri, and J. Lewandowski

Crystalline and Glass-Ceramic Systems

Dielectric and Resistivity of THz Materials: CdTe, CdZnTe and Tl3AsSe3 Crystals

N.B. Singh, R.N. Singh, A. Berghmans, D. Knuteson, D. Kahler, B. Wagner, and J. Hawkins
International Symposium on Ceramic Matrix Composites

Oxide CMCs/Coatings

Studies on 20% Gadolinia Stabilized Zirconia Thermal Barrier Coatings .................................................. 285
L. Chandrasagar, S. Vynatheya, S. Seetharamu, and P.M. Jebaraj

Functional Intermediate Layers for the Improvement of Thermal Barrier Coatings
Performance ..................................................................................................................................................... 297
C.R.C. Lima, and J.M. Guilemany

The Effect of Parameters on the Incorporation of Nano-Alumina in to Composite Nickel Electrodeposits ................................................................. 305
L. O'Donoghue, and M.J. Pomeroy

Poster

In Situ Neutron Diffraction Study on the Effect of Aluminium Fluoride on Phase Transformation of Mullite from Alumina/Clay ....................................................................................... 317
N. Tezuka, I.-M. Low, I. Davies, I. Alecu, R. Stead, M. Avdeev, E. Mehrbens, and B. Latella

Production and Characterization of Al2O3-Based Composites Reinforced with Different Metals ............................................................................................................................... 327

Fracture Toughness of Silicon Nitrides with Various Microstructures Determined by Indentation Fracture (IF) Method ............................................................................................................ 339
H. Miyazaki, H. Hyuga, Y. Yoshizawa, K. Hirao, and T. Ohji

Iron-Based Amorphous Metals: An Important Family of High-Performance, Corrosion-Resistant Materials

Introduction and Plenary I

Formation, Properties and Applications of Bulk Glassy Alloys in Fe-(Cr, Mo)-Metalloid System ................................................................. 349
A. Inoue, and K. Amiya

Synthesis, Characterization, Phase Stability & Neitronics I

Assessing the Thermal Stability of Bulk Metallic Glasses for Nuclear Waste Applications ............... 361
K. Hildal, J.H. Perepezko, and L. Kaufman
Corrosion Resistance I
Iron-Based Metallic Glasses with Exceptional Localized Corrosion Resistance in Chloride-Based Solutions .................................................................371
R. Huang, D. Horton, F. Bocher, and J.R. Scully

The Corrosion Resistance of Fe-Based Amorphous Metals:
Fe49.7Cr17.7Mn1.9Mo7.4W1.6B15.2C3.8Si2.4 and other Compositions...............................................................381
J. Farmer, J. Haslam, S. Day, T. Lian, C.-K. Saw, P. Hailey, J.-S. Choi, R. Rebak, J. Payer,
C. Blue, W. Peters, and D. Branagan

Industrial Salt Fog Testing of a SAM2X5 Coated Stainless Steel Cylinder.................................393

Examination of Galvanic Action between Fe-Based Amorphous Metals and Commercial Alloys........................................................................403
H. Ha, and J. Payer

Mechanical Properties & Damage Tolerance I
Thermal Exposure Effects on Mechanical Behavior of Iron-Based Metallic Glass.........................413
A. Shamimi, and J.J. Lewandowski

Quasi-Static and High Strain-Rate Compression Behavior of an Fe-Based Bulk Metallic Glass.............................................................................427
G. Sunny, V. Prakash, A. Shamimi Nouri, and J. Lewandowski

Synthesis, Characterization, Phase Stability & Neutronics II
Neutron-Absorbing Coatings for Safe Storage of Fissile Materials with Enhanced Shielding & Criticality Safety........................................433
J.S. Choi, J. Farmer, C. Lee, L. Fischer, M. Boussoufi, B. Liu, and H. Egbert

Atomization, Thermal Spray & Applications I
Applications in the Nuclear Industry for Thermal Spray Amorphous Metal and Ceramic Coatings ........................................................................445
J. Blink, J. Choi, and J. Farmer

Corrosion Resistance II
Cyclic and Linear Polarization of Yttrium Containing Iron-Based Amorphous Alloys ..................459
S.D. Day, T. Lian, J.C. Farmer, and R.B. Rebak
Long-Term Corrosion Testing of Thermal Spray Coatings of Amorphous Metals:
Fe49.7Cr17.7Mn1.9Mo7.4W1.6B1.1Si2.4 and Fe48Mo14Cr15Y2C15B6 .................................471
J. Farmer, S. Day, T. Lian, C.-K. Saw, P. Hailey, J. Payer, L. Aprigliano, B. Beardsley,
and D. Branagan

Corrosion Resistance of High-Boron High-Molybdenum Iron-Based Amorphous Metal
Fe49.7Cr17.7Mn1.9Mo7.4W1.6B1.1C3.8Si2.4 for Spent Nuclear Fuel Criticality
Control Application .................................................................................................................................483
S. Day, J. Haslam, P. Hailey, C. Saw, J. Farmer, N. Yang, and D. Branagan

Anodic Behavior of SAM2X5 Material Applied as Amorphous Coatings .................................497
P.D. Hailey, J.C. Farmer, S.D. Day, and R.B. Rebak

**Corrosion Resistance III**

Dissolution Modes and Effect of High Temperature Aging on the Corrosion Resistance of
Iron Based Amorphous Alloys .................................................................................................................511

Methods to Examine Corrosion damage Evolution for Fe-Base Amorphous Alloy ....................525
P. Pharkya, X. Shan, J. Payer

**Introduction and Plenary III**

Iron-Based Amorphous Metals: The High Performance Corrosion Resistant Materials
(HPCR M) Program .................................................................................................................................537
J. Farmer

**Atomization, Thermal Spray & Applications II**

Comparison of Crevice Corrosion of Fe-Based Amorphous Metal and Crystaline Ni-Cr-
Mo Alloy ..................................................................................................................................................569
X. Shan, H. Ha, and J. Payer

**Synthesis, Characterization, Phase Stability & Neutronics III**

XRD Technique: A Way to Discriminate Structural Changes in Iron-Based Amorphous
Materials ..................................................................................................................................................581
C.K. Saw, T. Lian, S.D. Day, and J.C. Farmer

**Mechanical Properties & Damage Tolerance II**

Characterization of Corrosion Resistant Amorphous Metal Coatings Subsequent to
Mechanical Deformation ..........................................................................................................................591
J.J. Haslam, J.C. Farmer, S. Day, P. Hailey, T. Lian, and L.F. Aprigliano
Poster

Evaluation of the Wear Characteristics of Continuously Cast Ductile Iron and AISI 1144 Steel With and Without Q & T Heat Treatment .................................................................607
P. Gangasani

Next Generation Biomaterials: Advanced Processing, Characterization and Modeling of Materials for Medical Devices

Biomaterial Surfaces and Imaging

Application of Rare-Earth Doped Ceramic Nanophosphers for Bioimaging under NIR Excitation......................................................................................................................619
K. Soga, Y. Saito, K. Shimizu, Y. Okumura, and T. Konishi

Processing and Characterization of Metallic Implant Materials

Fabrication of ASTM F75 Powders for Surgical Implants by the Uniform-Droplet Spray Process .........................................................................................................................625
S. Roy, T. Ando, M. Ishida, and M. Nishida

Physical and Mechanical Properties Characterization of Biomaterials, Part I

Nanotechnology for Treating Organ Failure........................................................................................................633
T.J. Webster

Thermal Shock Resistant Materials

Thermal Shock Resistant Materials I

Probe Method for Local Uniformity within Particulate Filters .................................................................645
G. Crosbie

Thermal Shock Resistant Materials II

Analysis of Thermal Stress in a Honeycomb Structure ..............................................................................657
M. Miyazaki, Y. Kato, Y. Miyairi, M. Makino, and P. Busch

High Temperature Brazing of Monolithic 430 to Porous 430L Stainless Steel for Hydrogen Separation Applications .........................................................................................................................255

*V. Malave, A. Meier, and K.S. Weil*

Influence of Laser Welding on the Formability of AHSS Steels .................................................................................................................................267

*N. Sr.eenivasan, M. Kuntz, and Y. Zhou*
Effect of Titanium and Carbon on the Microstructure of Fe-Al-Cr Weld Overlays

K. Adams, and J. DuPont

Repair and Manufacture of Industrial Gas Turbines and Aero-Engine Components

Laser Weld Repair of Single Crystal Ni-Base Superalloys

T. Anderson, J. DuPont, and T. DebRoy

Repair Welding of Nodular Iron Castings for Heavy Duty Gas Turbines

S. Janssen, E. Maldfeld, and J. Braun

Laser Powder Deposition for Making Functional Net-Shape Parts and Repairing Damaged Gas Turbine Compenents

L. Xue, J. Chen, S.-H. Wang, and Y. Li

Welding Metallurgy and Failure Analysis

Mechanisms of Macrosegregation Formation Near Fusion Boundary in Welds Made with Dissimilar Filler Metals

Y.K. Yang, and S. Kou

Investigation of Metallurgical Features and Local Mechanical Properties in Laser Drilled Waspaloy

R. Bright, J. Garofano, C. Weiss, M. Aindow, and H. Marcus

Evidence of Macrosegregation near Fusion Boundary in Welds Made with Dissimilar Filler Metals

Y.K. Yang, and S. Kou

Brazing and Other Joining Methods

The Use of Electrodeposited Coatings as Interlayers in Transient Liquid Phase Bonding

R.K. Saha, and T.I. Khan

Maintaining Work Hardening in Resistance Brazed Aluminum Alloy Periodic Cellular Metals

E. Bele, B. Bouwhis, and G. Hibbard

Brazing of Porous Aluminum Alloy 6101 to Monolithic Aluminum Alloy 6061 for Composite Sandwich Structures Used in Thermal Management Applications

A. Bauer, A. Meier, M. Powell, and K.S. Weil

Reactive Air Brazing of ZTA to Ni Alloys with Ag-CuO Braze Alloys

E. Prevost, A.J. DeMarco, B. MacMichael, A. Meier, J. Hoffman, and W. Walker
Joining of Ceramics

Experimental Complex for Investigations of High-Temperature Behaviour of Molten Metals in Contact with Refractory Materials.................................................................409
N. Sobczak, R. Nowak, W. Radziwill, J. Budzioch, and A. Glenz

Alloy Depletion and Martensite Formation during Glass-to-Metal Joining of Austenitic Stainless Steels..................................................................................................................417

Solid-State Joining Processes

Application of Ultrasonic Peening in Manufacturing, Rehabilitation and Repair of Welded Elements and Structures ..............................................................................................429
Y. Kudryavtsev, and J. Kleiman

Automatic Fault Detection in Friction Stir Welding........................................................................441
D. DeLapp, T. Prater, T. Lienert, and M. Bement

Recent Developments in Steel Processing

Casting

Modelling of the Concentric Solidification Technique using DICTRA™
S. Aminorroaya, R. Dippenaar, and M. Reid

In-situ Observation of the Delta-Ferrite to Austenite Phase Transition in Fe-C Alloys
S. Niknafs, and R. Dippenaar

Embrittlement Mechanisms at High Temperatures for a C-Mn Steel with High Residuals
J. Calvo, J.M. Carbrera, A. Rezaeian, and S. Yue

Effect of Mould Taper, Mn/S Ratio and Ems on Quality of Continuously Cast Bloom

Influence of the Casting Conditions on Slab Quality of Low Carbon Steel
G. Wen, P. Tang, G. Luo, H. Xu, and Z. Chen

Processing and Modeling

Skin-Pass Rolling of Steel Strip Using Liquid Nitrogen

Deformation Characteristics of Oxide Scale in Hot Rolling by Scale Transfer Method
Using Vacuum Hot Rolling Mill
A. Segawa, and T. Taguchi

Validity of Heat Transfer Coefficient Based on Cooling Time, Cooling Rate, and Heat
Flux on Jominy End quench Test
A. Sugianto, M. Narazaki, M. Kogawara, and A. Shirayori

Efficient Cyclic Thermal Processing of Materials
S.S. Sahay

Application of the Life Cycle Modeling to Forging of Connecting Parts
L. Madej, S. Weglarczyk, M. Packo, R. Kuziak, and M. Pietrzyk

Standardized and Computer Controlled Packing Philosophy (DCPP) for Steel
J. Rajagopal, and T. Aijo
Thermomechanical Processing

Heat Transfer during Run-Out Table Cooling - Effect of Jet Configuration ...........................................221
M.A. Wells, M. Militzer, and V. Prodanovic

Influence of the Chemical Composition on Transformation Behavior of Low Carbon Microalloyed Steels under Continuous Cooling .................................................................233
J. Calvo, A.M. Elwazrî, S Bai

Effects of Alloying Elements on Microstructure and mechanical Properties of Microalloyed Steels Undergoing Cool Deformation .................................................................243
A. Fatehi, J. Calvo, A.M. Elwazrî, D.Q. Bai, and S. Yue

Thermomechanical Processing Effects on the Elevated Temperature Behavior of Niobium Bearing Fire-Resistant Steel .....................................................................................................255

Thermomechanical Treatment of Nb-Microalloyed Weather Resistant Steel ...........................................267
S.N. Prasad

Surface Treatment and Corrosion

Subrata Ghosh, and Shubhalok Ghosh

Integrated Machining and Surface Modification of Steel Components ........................................................299
M.A.A. Sadiq, P. Laxminarayana, and V.S.R. Murti

Developments in Citric Acid Passivation of Stainless Steel ........................................................................307
R. Kremer

The Retrieving of Boronizing Coverings on Steel Received in Self-Propagating High-Temperature Synthesis Conditions ......................................................................................................313
B. Sereda, and S. Sheyko

Effect of Thermal Cycling on the Corrosion and Microstructure of Plain Carbon Steels .............................317
Elmaryami, and Abdalmanam

Poster

Microstructure Evolution of a V-N Steel during Seamless Tube Hot Rolling .............................................331
R.N. Carvalho, M.A.C. Ferreira, D.B. Santos, and R. Barbosa

Continuous Annealing Technology of Cold Rolling Automotive Sheet ....................................................341
H. Jianfeng
Measurement of the Mechanical Properties of Austenite-Martensite Mixtures at the Reaction Temperature........................................................................................................................................353
C. Zheng, and D. Watt

Steel Product Metallurgy and Applications

Thermomechanical Processing

Microstructure and Mechanical Properties of High Strength Linepipe Steels ..................355
D. Bai, L. Collins, F. Hamad, X. Chen, and R. Klein

Microstructure and Heat Treatment

The Effect of Heating Rate and Prior Microstructure on Austenitization Kinetics of 5150 Hot-Rolled and Quenched and Tempered Steel.................................................................367
K.D. Clarke, and C.J. Van Tyne

Effect of Tempering on the Microstructure and Properties of Copper and Boron Bearing Very Low Carbon Steels Treated with DQ/T .................................................................383
S. Jiao, X. Liang, C. Wang, L. Jin, and Y. Gong

Flash Bainite Nucleated in 80ms by Water Quenching .................................................393
G. Cola Jr.

Bainitic Transformation in Carburized 4317 M2 ..........................................................403
P. Nash, and S. Chupatanakul

Tool Steels

An Assessment of Material Properties on Bohler W360 Isobloc for Hot Work Tool Steel ........423
F.T. Lee

Choosing Vancron Grades for Cold Work Metal Forming Tools ..................................433
F.T. Lee

Enhancing Plastic Mould Steel Tooling Performance with Nimax .................................439
F.T. Lee

Investigation of the Influence of Deep Cryogenic Treatment on Residual Stresses in HCHC D2 Steels using X-Ray Diffraction .................................................................447
S.V. Lomte, and S.B. Chikalthankar
Product Metallurgy I

The Strengthening Behavior in V-N Steels .................................................................461
M.J. Hua, C.I. Garcia, A.J. DeArdo, M.K. Miller, and R.J. Glodowski

Limited - Hardenability Steels and New Heat Treating Technologies .......................471
N. Kobasko

Development of 780MPa Grade Steel Plates with Excellent Deformability by
Microstructural Control through the On-Line Heating Process ....................................481
K. Ueda, S. Endo, S. Mitao, N. Shikanai, and T. Ito

Study of the Grain Size Effect on the Deformation Behavior of Microalloyed Steels ..........493
K. Muszka, J. Majta, and P.D. Hodgson

Cyclic Plasticity of Steel .................................................................................................505
C.K. Seal, M.A. Hodgson, and W.G. Ferguson

Product Metallurgy II

Microstructure and Properties of Cold-Rolled-and-Annealed Low-Carbon Manganese
TRIP Steels ...................................................................................................................515
M.J. Merwin

Mechanical Behavior and Microstructure Characteristics of TRIP Steel Plates under
Various heat-Treating Conditions ................................................................................537
Q. Tian, and X. Dong

Strain Aging Behavior of Bake Hardening Steel for Automotive Application ..................547
A. Vasilyev, N. Kuzmin, a Lee

Influence of Normalizing Conditions on Electrical Steel Texture Development ..............563
S.M. Shin, S. Birosca, S.K. Chang, and B.C. De Cooman

Mechanical Properties of 3% Silicon Steels during Warm Deformation .......................575
S. Lee, and S.K. Chang, B.C. De Cooman

Morphology and Crystallography of Copper Sulfide Precipitated during Isothermal Heat
Treatment in Iron Alloy ...............................................................................................587
Z. Liu, M. Kuwabara, and Y. Iwata

A Study of the Relationships Between Inclusion Morphology and Reduction Ratio for
Bar Products ................................................................................................................599
Y. Huang, and J. Yang

Study of Hot Workability of Free-Cutting Steels by the SKIZ Technique .......................609
C. Revilla-Gomez, B. Lopez, and J.M. Rodriguez-Ibabe
Stainless Steels

Dispersion Strengthening of σ Phase in Ferritic and Austenitic Stainless Steels
After Hot Rolled ......................................................................................................................................621
  C.-C. Hsieh, D.-Y. Lin, and W. Wu

Microstructural Investigation of Stainless Steel AM350 Pulsed Nd-YAG and Fibre Laser Welds .......................................................................................................................................................633
  L. O'Donoghue, M. Quinlan, and P. Phelan

Effect of Nitrogen Content and Strain Rate on the Deformation Behavior of High-Nitrogen Austenitic Steel (18Cr-14Mn-4Ni-3Mo-xN) with Various Nitrogen Contents..................645
  S.M. Nam, Y.-S. Kim, and S.-J. Kim

Poster

Sliding Wear Mechanism of the Ultra-Fine Grained (UFG) Dual Phase Steel under Low and High Applied Load Conditions ........................................................................................................655
