ASM Handbook®

Heat Treating Volumes

Prepared under the direction of the ASM International Handbook Committee

Review the detailed table of contents to each of the four volumes by selecting the title.

**Volume 4A**
Steel Heat Treating Fundamentals and Processes

*Volume Editors*

Jon. L Dossett, FASM, Consultant
George E. Totten, FASM, Portland State University

**Volume 4B**
Steel Heat Treating Technologies

*Volume Editors*

Jon. L Dossett, FASM, Consultant
George E. Totten, FASM, Portland State University

**Volume 4C**
Induction Heating and Heat Treatment

*Volume Editors*

Valery Rudnev, FASM, Inductoheat Inc.
George E. Totten, FASM, Portland State University

**Volume 4D**
Heat Treating of Irons and Steels

*Volume Editors*

Jon. L Dossett, FASM, Consultant
George E. Totten, FASM, Portland State University

Electromagnetic Testing ........................................... 527

Gas Carburizing
Olga K. Rowan and Gary D. Keil ................................. 528
Thermodynamics and Kinetics .................................. 528
Carbon Sources and Atmosphere Types ....................... 532
Carbon-Transfer Mechanism ................................... 535
Carburizing Modeling and Case Depth Prediction ......... 536
Carburizing Equipment ........................................... 538
Furnace Temperature and Atmosphere Control ............ 540
Carburizing Cycle Development ................................ 544
Process Planning .................................................... 547
Dimensional Control .............................................. 555
Case Depth Evaluation ........................................... 556

Pack Carburizing ...................................................... 560

Introduction ....................................................... 560
Advantages and Disadvantages ................................ 560
Carburizing Medium and Compounds ......................... 561
Process Control .................................................... 562
Furnaces for Pack Carburizing ................................ 562
Carburizing Containers ........................................ 563
Packing ......................................................... 564
Liquid Carburizing and Cyaniding of Steels
Jon Dossett .................................................... 565
Cyanide-Containing Liquid Carburizing Baths ................. 565
Cyaniding (Liquid Carbonitriding) ................................ 566
Noncyanide Liquid Carburizing ................................ 567
Carbon Refrigeration .......................................... 567
Hardness Gradients ............................................. 571
Process Control ................................................. 571
Control of Case Depth ........................................ 572
Dimensional Changes ......................................... 574
Quenching Media .............................................. 574
Salt Removal (Washing) ........................................ 575
Typical Applications .......................................... 576
Precautions in the Use of Cyanide Salts ........... 577
Disposal of Cyanide Wastes .................................. 578
Low-Pressure Carburizing
Volkert Heuer .................................................. 581
Process ........................................................ 581
Physical Principles ............................................. 582
Equipment for Low-Pressure Carburizing ....................... 583
Carburizing Strategies ......................................... 584
Prediction of Carbon Profiles ................................ 585
Applications ..................................................... 586
Quality Control of the LPC Process in Mass Production .... 587
High-Temperature LPC ........................................ 587
Plasma Carburizing
Brigitte Clausen and Winfried Graffen ....................... 591
Principles of Plasma Carburizing ................................ 591
Carburizing Reaction in Plasma Carburizing ................. 593
Advantages and Disadvantages ................................ 594
Production Equipment ......................................... 595
Application Example ........................................... 596
Cyaniding of Steels
Jon Dossett .................................................... 599
Process Description ............................................ 600
Case Composition .............................................. 601
Depth of Case .................................................. 603
Case-Depth Uniformity ........................................ 603
Hardenability of Case ......................................... 604
Hardness Gradients ............................................. 605
Void Formation .................................................. 605
Control of Retained Austenite ................................ 605
Furnace Atmospheres .......................................... 606
Temperature Selection ......................................... 609
Quenching Media and Practices ................................ 610
Tempering ....................................................... 611
Hardness Testing ................................................. 612
Applications ..................................................... 613
Cyaniding of Powder Metallurgy Parts ......................... 614
Ammonia Guidelines ............................................ 614
Nitriding and Nitrocarburizing of Steels ......................... 617
Fundamentals of Nitriding and Nitrocarburizing
E.J. Mittenmeyer ................................................. 619
Introduction ...................................................... 619
1. Advent of Nitriding .......................................... 619
3. The Iron-Nitrogen Phase Diagram ......................... 621
4. Nitriding Potential and the Lehrer Diagram .............. 622
5. Controlled Nitriding ........................................ 623
6. Carburizing Potential and Controlled Carburizing ....... 624
7. Controlled Nitrocarburizing ................................ 625
8. Local Equilibria and Stationary States ...................... 626
9. Microstructural Development of the Compound Layer ... 628
11. Microstructural Development of the Diffusion Zone ... 635
12. Kinetics of Diffusion-Zone Growth ....................... 639
Epilogue ......................................................... 641
Gas Nitriding and Gas Nitrocarburizing of Steels
K.-M. Winter and J. Kalucki ................................ 647
Introduction ..................................................... 647
Terminology for Gas Reactions ................................ 648
Low-Temperature Nitriding and Nitrocarburizing ............ 649
Nitriding ......................................................... 651
Ferritic and Austenitic Nitrocarburizing ......................... 656
Other High-Temperature Processes .......................... 657
Nitriding Processing ........................................... 659
Atmosphere Control ............................................ 661
Measuring the Potentials ...................................... 665
Temperature Control ........................................... 668
Impact of Measuring Errors ................................... 669
Simulation of Nitriding Processes ............................. 669
Inspection and Quality Control ................................ 670
Lab Equipment and Sample Preparation ....................... 670
Selective Nitriding ............................................. 673
Common Problems ............................................. 673
Rules of Thumb .................................................. 674
Safety Precautions ............................................. 674
Equipment ....................................................... 675
Liquid Nitriding of Steels
George Pantazopoulos ........................................ 680
Liquid Nitriding Applications ................................ 680
Liquid Nitriding Systems ...................................... 680
Liquid Pressure Nitriding ...................................... 681
Aerated Bath Nitriding ........................................ 681
Case Depth and Case Hardness ............................... 683
Operating Procedures ......................................... 683
Equipment ....................................................... 684
Maintenance Schedules ........................................ 684
Safety Precautions ............................................. 685
Liquid Nitrocarburizing ........................................ 685
Nontoxic Salt Bath Nitrocarburizing Treatments ............. 686
Wear and Antiscuffing Characteristics of the Compound Zone Produced in Salt Baths ............................. 687
Appendix 1—Liquid Bath Nitriding Noncyanide .............. 688
Baths ........................................................ 688
Appendix 2—Liquid Bath Nitriding ............................ 689
Plasma (Ion) Nitriding and Nitrocarburizing of Steels
Jan Elwart and Ralph Hunger ................................ 690
Introduction ..................................................... 690
Process History and Developments ............................ 690
Glow-Discharge Process ....................................... 693
Plasma Nitriding Furnaces .................................... 695

Introduction to Heat Treating of Tool Steels

Rafael A. Mesquita and Reinhold E. Schneider ........................ 277

Classification of Tool Steels ..................................... 277

Production of Tool Steels ......................................... 278

Heat Treatment Applied to Tool Steels .............................. 279

Processes and Furnace Equipment for Heat Treating of Tool Steels

R. Schneider, Rafael Mesquita, H. Altena, T. Müller and
P. Seemann .......................................................... 288

Equipment for Austenitizing, Quenching, and Tempering
of Tool Steels ......................................................... 288

Equipment for Nitriding and Nitrocarburizing of
Tool Steels ............................................................ 296

Distortion in Tool Steels

Reinhold Schneider, Rafael Mesquita
and Wolfgang Schützenhöfer ...................................... 300

Nature and Causes of Distortion .................................... 300

Process Aspects of Distortion ....................................... 302

Material Aspects of Distortion ..................................... 304

Prediction of Distortion and Residual Stresses by
Numerical Simulation ............................................... 307

Control of Distortion in Tool Steels ................................. 312

Design ................................................................. 312

Chemical Composition ............................................... 312

Initial Condition ..................................................... 313

Machining Procedure ................................................ 313

Main Heat Treatment ................................................. 315

Stabilizing Treatments ............................................... 316

Commercial Practice ................................................ 319

Heat Treating of Cold-Work Tool Steels—Low- and
Un-Alloyed Water and Oil Hardenable Steels

Rafael A. Mesquita, Reinhold Schneider,
and Cristiane Sales Gonçalves .................................... 320

Water-Hardenable Tool Steels ....................................... 320

Shock-Resisting Tool Steels ......................................... 322

Oil Hardening Cold-Work Tool Steels ............................. 324

Low-Alloy Special-Purpose Tool Steels ............................ 326

Carbon-Tungsten Special-Purpose Tool Steels ................. 327

Heat Treating of Cold-Work Tool Steels—Medium-Alloy

Air-Hardenable, High-Carbon High-Chromium and
High-Vanadium-Powder Metallurgy Steels

Rafael A. Mesquita, Reinhold S.E. Schneider and
Cristiane Sales Gonçalves ........................................ 329

Recommended Heat Treating Practices ........................... 330

Heat Treating of Hot-Work Tool Steels

Rafael A. Mesquita, Reinhold Schneider,
and Cristiane Sales Gonçalves .................................... 336

Heat Treatment of H Series and Low-Alloy Hot-Work Steels 339

Examples of Heat-Treating Procedure for Hot-Work Tools 344

NADCA Requirements for Steel Grades and Heat
Treating ................................................................. 345

Heat Treating of High-Speed Tool Steels

Rafael A. Mesquita, Reinhold Schneider,
and Cristiane Sales Gonçalves .................................... 347

Recommended Heat-Treating Procedures ......................... 350

Hardening of Specific Machine Tools .............................. 354

Heat Treating of Mold Steels and Corrosion-Resistant Tool Steels

Rafael A. Mesquita, Reinhold Schneider,
and Cristiane Sales Gonçalves .................................... 358

Mold Steels ........................................................... 358

Recommended Heat Treating Practices ........................... 358

Corrosion-Resistant Tool Steels .................................... 359

Recommended Heat Treating Practices ........................... 360

Heat Treated High-Alloy Steels .................................... 363

Heat Treating of Ferritic Stainless Steels ........................ 365

Metallurgy of Ferritic Stainless Steels ........................... 365

Alloy Types ........................................................... 366

Annealing .............................................................. 368

Stabilization ........................................................... 368

Castings ................................................................. 368

Properties ............................................................... 369
