

**Prof. H. K. D, H. Bhadeshia**  
**Dept. of Materials Science and Metallurgy, University of Cambridge**

Harry Bhadeshia is the TATA Steel Professor of Metallurgy at the University of Cambridge. His research is concerned with the theory of solid-state transformations in metals, particularly multicomponent steels, with the goal of creating novel alloys and processes with the minimum use of resources. He is the author or coauthor of more than 600 research papers and six books on the subject. He is a Fellow of the Royal Society, the Royal Academy of Engineering, the National Academy of Engineering (India), and the American Welding Society.
